

OnClub™

A UNIQUE SOURCE OF ADMINISTRATIVE POWER

 **Epani**

Powerful, sure... but what is OnClub, exactly?

OnClub is a system designed specifically to facilitate golf club administration, thereby boosting the value of individual membership and increasing accessibility to the game itself. It is obvious, that a system delivering such vital services has to be powerful...

The system comprises a number of functional modules. It can therefore be extended gradually, whenever needs for additional functions occur. In its full extension, OnClub is capable of handling practically all the administrative work of the club secretariat!

The core function of the system is the handling of membership administration and member statistics. Within the system, there is an impressive range of sub-functions facilitating the most frequent administrative work emanating from transactions between the club and its members and guests.

An extensive network of vital functions!

The development of OnClub started a couple of years ago. We set out to apply modern information technology to automate the traditional routines of golf administration. By relieving club secretariats, we found it possible to create a surplus of additional time for personalized member service. We also found ways to streamline the flow of information and to utilize courses in a more rational way!

Each basic function has a number of sub-functions. The total administrative power package can be tuned to meet the specific demands of the club. From limited number of functional modules initially, the system can be extended to handle practically all the administrative routine work within the club secretariat!

Automated administration!

The "classical" problems of golf club administrations are well known to both club members and club officials. Due to seasonal fluctuations, the load of work at club secretariats will sometimes "eat" all the administrative resources available. These resources cannot be dimensioned for the peak periods during high season. By its automated administrative functions, OnClub offers a multi-level solution to this problem. On next page are some of the basic functions handled by the system.

Membership administration

This module will register new members, organize membership applicants in a "waiting" file, register relevant personal data for individual members, handle the charging of fees and the administration of loans to members, remove members from the files, register club officials, enable swift searching for individual members, etc.

Club statistics

Handles all kinds of statistics comprising club members and sponsors and a number of additional sectors – e.g. prospective members, former members, shares, tee time reservations, cashier, tournaments, calendar, etc.

Administration of tournaments

Within this module, all the administrative work before, under and after a tournament can be carried out with minimum human effort. The system handles tournament conditions, entries, listing of players, seeding, handicap control, updating of score cards, results, statistics and leader board. After the tournament, it will produce a number of additional services – e.g. registration of trophies, updating of handicaps, listing of suspended players, etc.

Handicap & score card administration

Provides efficient handicap control and will keep record of individual scores. Will also keep handicaps updated, individually or by player category.

Cashier

Provides a wide range of automated services traditionally performed manually within the cashier function – e.g. cash payments, sales administration, green-fees, entries, etc.

Invoice service

Will handle the flow of invoices to members and register payments. Will also alert the operator when an invoice is overdue and handle the charge of annual membership fees.

What if OnClub is only the beginning?

Every installation of OnClub at the club level is a stitch in a possible future global IT network connecting golf clubs and their federations without the traditional boundaries set by national borders.

Mr Ove Olsson, secretary at The Golf Club of Halmstad, Sweden:
"When it comes to serving our members,
we cannot afford slices or hooks" ...

The Golf Club of Halmstad in southern Sweden has a tradition dating back to 1930, the year when the club was founded. The renown of its Northern Course has spread among golfers all over Europe. The club has 2.300 members and some 18.000 players come here annually to enjoy the technical challenges and the beautiful coastal scenery.

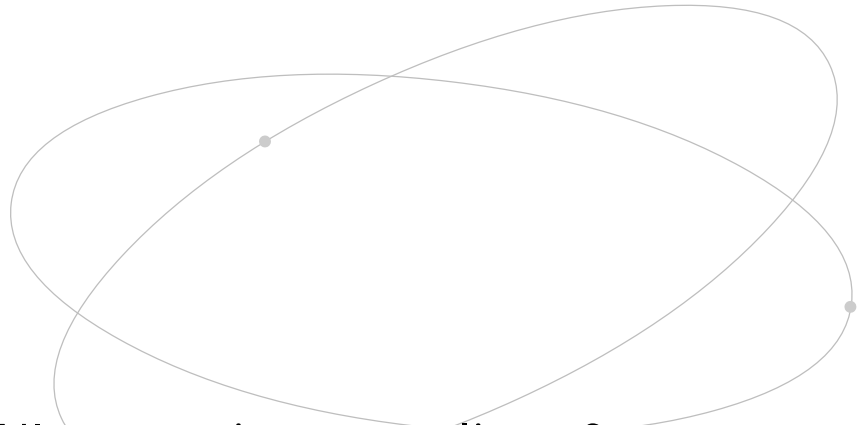

The club also served as a platform in the development of the functions within the OnClub concept and today uses the system in its full extension. The club secretary, Mr Ove Olsson, has taken an active part in the development process.

- It all began in 1991. The founder of what came to be Epani, Mr Niklas Eklund was then a young student and a frequent player at our club. He set out to explore the possibilities to computerize some of our basic administrative routines, the handling of membership lists and cash flows within the club. At the same time, our national federation started a development project to solve the same functions...

In 1995, the Swedish Golf Federation made a demand specification for a system based upon the Windows interface. Offers were submitted from a number of leading software producers, the winning bid however made by Mr Eklund and his friends at Epani. Well, the rest is history. Mr Olsson continues:

- Today, the system performs its duties in more than 300 clubs all over Sweden. It is reliable and saves unimaginable volumes of work. Since the guys involved in the project are avid golf amateurs, the system was developed on a solid platform of golf culture. The solution has facilitated the administration at many levels, and most important of all: It has improved the service we are able to offer considerably. In my opinion, this is the ultimate benefit. When it comes to serving our members, we cannot afford slices or hooks...

EPANI – premium supplier of software to the global golf society!

Epani started with a vision. We wanted to offer golf clubs and national federations all over Europe efficient software facilitating their administration and improving information and service directed towards the golfers. That vision is on its way towards fulfillment. Today, we are developing information networks in several European countries. In the next stage, federations and clubs all over Europe will be able to establish direct communication via an IT-network based on Epani standards.

Our client software comprises the basic software for club level administration and a portfolio of additional programs meeting specific needs within the clubs. The core functions of the client software operate on Windows NT servers and use Microsoft servers for storage and processing of data.

An additional power pack of software for clubs!

The software distributor to golf clubs will be offered a portfolio of products based on the spearhead technology presently building the future European standard. Distributors teaming up with Epani will find a treasure of excellent sales point within this range of products. Here is a brief introduction to the add-on programme.

OnScreen™

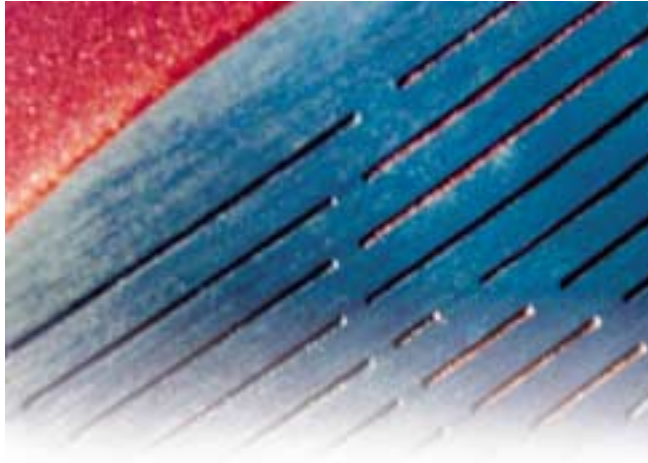

is a new information and marketing medium offered within the *OnClub* concept, but also separately. Via TV monitors located strategically in the clubhouse, golfers are served a medley of vital golf information, commercials, results, entries and reports from major tournaments.

OnTee™

is a computerized system for tee time reservations. It enables golfers to make tee time reservations via the Internet or via an automated phone answer service at the club. Reduces time spent waiting on busy phone lines and facilitates golfer's access to the sport as well as planning at club level.

OnCourse™

is a software facilitating the administrative part of the greenkeeper's job, leaving more time available for the actual tending of greens and fairways. For efficient cost control and rational management of the daily duties.

Epani is a continually expanding company specializing in Information Technology for the sport of golf. Bringing satisfaction and enjoyment to golfers around the world is our highest priority. In doing so, we offer a complete national IT system aimed towards golf associations, golf districts, golf clubs, and even the individual golfer. We want to utilize our system's accessibility, simplicity, and cost-effective management in boosting the world of golf into the next millenium.
